

**Tombstone feed front**

Spinder has expended its program with a new feed front. This tombstone feed front replaces the well-known diagonal model and is available for all age groups, from calves to mature cows. The design of the Spinder tombstone feed front has several advantages above the diagonal feed front or a simple tubing feed front. Here calves can learn, on a very early age, how to deal with a (self-locking) feed front; to lift up their heads to move through the feed front to eat. While eating this feed front provides for a wide enough feeding place; each age category has the right feeding width. This prevents pushing and shoving, so the animals can eat in peace.

**Major characteristics:**

- Large head opening, also appropriate for horned cattle;
- Available for two week old calves to mature cows;
- Less pushing and shoving, the animals can eat in peace;
- Neck collar friendly;
- Less waste of feed; animals do not retract to chew;
- Cost-effective feed front;
- No pressure points on neck as with a tubing feed front;

**Dimensions**

The tombstone feed front is available for all age groups, from two week old calves to mature cows. The standard length of one section is 325 cm. Several smaller sections are available to match, size depending on number and width of the feeding places.

**Mounting**

The tombstone feed front is mounted to 76 mm support posts with our universal fasteners. This way it is possible to extend a feed front section by 5 cm. If this proves insufficient, longer feed front fasteners are available.

By installing a so called hinge assembly every section can be turned into a gate.
