

01.18.1.. Model 'Fitbox' for cows
mounted to support posts 60 mm

The 'Fitbox' gives way to the movement of the cow.

Flexible freestall divider model 'Fitbox', mounted to support post 60 mm

Animal friendly, resilient and long lifespan:

Cow comfort and thus a longer productive life have to be on a higher level, the flexible 'Fitbox' from Spinder fulfills this. If a cow touches the cubicle divider when standing up or lying down, the cubicle divider springs up and pushes back; not annoyingly or incriminating, but pleasant. The narrow profile of the cubicle divider makes the space optimally utilized; more space for the cow. At the same time, this narrow profile gives the farmer also a better overview of his barn, as there is less material in view. Being fit is important; even for a cow. The farmer who is looking for just that little bit more comfort for his animals is going to discover the 'Fitbox' and thus improve the productive lifespan of the herd.

The product:

The 'Fitbox' is a combination of glass fiber rods (solid 33 mm), a steel connecting part and steel clamps. To be applied on various cubicle deck sizes. For modern livestock Spinder recommends a cubicle width of 120 cm; due to the narrow profile of the 'Fitbox', 115 cm can also be a suitable cubicle width. The 'Fitbox' can be used with any type of cubicle covering and the dimensions can be adapted to almost all situations because the fiberglass rods can be shortened.

Waved neck bar:

The 'Fitbox' can be equipped just like any other cubicle with a waved neck bar. A waved neck bar directs a cow straight into the stall and ensures straight lying cows.

Flexible freestall divider for cows model 'Fitbox', mounted to support post 60 mm. (divider, incl. clamps for attachment to post 60 mm)
